- 4. Conclusion

Problem Statement

- Institutions need a simple way to collect feedback from users.
- Manual feedback collection is slow and difficult to analyze.
- A system is needed to collect ratings and analyze satisfaction levels quickly.

Proposed Solution

- A console-based C++ Feedback Collection System.
- Allows users to submit ratings (1–5).
- Stores responses using vectors.
- Generates statistical summary and satisfaction level.

Working / System Flow

- User opens program
- Menu displayed
- User submits rating
- Ratings stored in vector
- System calculates average, min, max and distribution
- Displays summary and satisfaction level

Conclusion

- The system demonstrates use of C++ concepts like vectors, loops, functions and conditionals.
- Provides simple analysis of feedback.
- Can be expanded into a web-based or database-driven system.
